

SUMESH S

Senior Product / Program Manager — Agile Delivery, Roadmap Ownership & Data-Driven Prioritization

Bangalore, India | +91 9739669151 | sumesh.nair.05@gmail.com

SUMMARY

Product-minded Agile practitioner with 12 years enabling delivery for consumer platforms at scale, including 7 years and counting at Swiggy Ltd. owning roadmap, launch, and prioritization for on-app merchandising surfaces used by millions of customers. Skilled at translating ambiguous, cross-functional problems into shippable roadmaps: partnering with Product, Design, Engineering, Data, and Operations; instrumenting funnel metrics to prioritize what to build next; and driving initiatives from pilot to pan-India scale. Comfortable owning outcomes (engagement, conversion, revenue) without owning end-to-end UX execution, and applies generative AI tools responsibly to improve workflow speed and quality. Complements this with independent product-strategy research into AI-powered customer support automation platforms (Zendesk, Freshdesk, Salesforce Agentforce) and their underlying resolution, triage, and knowledge-grounding mechanics.

EXPERIENCE

Sr. Manager, Project Management — Product Operations & On-App Merchandising | *Swiggy Limited, Bangalore, India* — Jun 2019 – Present

- Own end-to-end PI Planning and roadmap execution for on-app merchandising across five business lines (Food, Instamart, Dineout, Genie, Scenes) — orchestrating product design, content, and engineering delivery for surfaces used by millions of customers daily.
- Partner continuously with Product Owners, Product Design, Product Operations, Product Management, Business Finance, and Config stakeholders to scope, sequence, and launch initiatives — the same cross-functional operating rhythm needed across Content Design, Engineering, Data Science, and CX Ops.
- Define and track a funnel of engagement and monetization metrics (impressions → CTR → CVR) to prioritize the roadmap and measure post-launch impact, applying the same “instrument the funnel, then prioritize on data” discipline used to track Automation Rate, Search AtR, and CSAT.
- Scaled a pan-India widget from 10x to 100x reach, unlocking new monetized ad revenue while supporting new product launches and existing product upgrades.
- Built out CPC and CPV monetization mechanics in partnership with traffic distribution, merchandising, and brand marketing teams to hit specified business metrics.
- Own vendor payment cycles and contracts for outsourced work in partnership with Legal and Business Finance — directly transferable to coordinating 3rd-party vendor and agent-tool integrations.
- Bring 6+ years of hands-on exposure to React and React Native, giving practical fluency in front-end constraints and trade-offs when partnering with engineering on customer-facing UI.
- Recognized as Swiggy Values Champion (League of Champions) and Most Valuable Player, OND 2025, for cross-functional delivery impact.

Sr. Compliance Analyst — Dangerous Goods | *Amazon* — Feb 2017 – Jun 2019

Market Analyst (BD) — Supply Chain Management | *JSW Steel* — Aug 2016 – Jan 2017

Business Development Executive — Client Acquisition | *Al Ansari Exchange, Dubai, UAE* — Sep 2015 – Jul 2016

Quality Assurance Specialist | *Amazon* — Apr 2014 – Jul 2015

Sr. BDM, Techno-Commercial | *AmbiQuant IT Solutions India Pvt Ltd* — Aug 2013 – Jan 2014

Finance & Accounts Associate | *IBM* — Feb 2013 – Aug 2013

SELECTED INDEPENDENT PROJECT

Product Strategy Case Study — AI-Powered Customer Support Automation Platform (B2B SaaS / Insurance)

- Self-directed research and product strategy exercise: sized the AI customer-support-automation market and benchmarked resolution-engine, agent-assist, triage/routing, knowledge-grounding, and analytics capabilities across Zendesk, Freshdesk, Salesforce Agentforce, and Intercom, alongside India-specific players (Haptik, Yellow.ai, Verloop, Gupshup, CoRover).
- Identified a white-space opportunity (insurance-claims orchestration) by diagnosing the sector's core problem as data/tool fragmentation rather than model quality, and mapped moat formation across integration depth, data flywheel, and cross-team network effects.
- Designed a 3-phase, 36-month product roadmap (embedded agent copilot → guardrailed autonomous action engine → proactive customer-ops platform), sequencing trust-building milestones (AHT reduction, autonomous resolution rate) against moat-building.
- Defined a land-and-expand GTM strategy — entry buyer, low-risk entry point, and usage-signal-based expansion triggers from single-team adoption to platform-wide budget.

CORE SKILLS

- Agile & Scrum • Product Roadmapping • Cross-Functional Stakeholder Management • Prioritization Frameworks
- Performance Metrics & Data-Driven Prioritization • Product & Project Management • Vendor & Contract Negotiation
- Strategic Planning • Operational Efficiency • Resource Allocation • Effective Communication • JIRA

CERTIFICATIONS & RECOGNITION

- What is Generative AI
- Undergoing AI First – Product Management, Airtribe (Expected completion: 28 Nov 2026)
- Basecamp: Project Management Best Practices
- Certificate of Commitment — Meeting Effectiveness
- League of Champions — Swiggy Values Champion
- Most Valuable Player — OND 2025

EDUCATION

Bachelor of Business Administration — C.V. Raman University, Bangalore (2010 – 2013)
